PROJECT CHARTER

Career Campus

From College to Career

A student-focused career guidance website that helps learners explore career paths, understand required skills, discover industry insights, and build a clearer roadmap toward their future.

Course	Web Programming
Course Code	CSE 2022
Group	Group 1
Project Type	Web Development / UI Prototype
Charter Date	10 September 2026

“From college to career — with a clearer path forward.”

SECTION A: PROJECT IDENTIFICATION

Project Title: Career Campus — From College to Career

Project Vision: To create a simple, approachable digital platform that guides college students from career exploration to practical preparation.

Target Users: College students and early-stage learners who need structured career guidance, skill awareness, and industry context.

Core Website Pages: Home, How It Works, Career Guide, Industry Insights, About, Login, and Get Started flow.

Current Scope: The project focuses on the public-facing website experience and navigation. A separate user dashboard is not part of the current project scope.

SECTION B: TEAM COMPOSITION

No.	Team Member	Role	Primary Responsibilities
1	Yugank	Team Lead / Full-Stack Coordinator	Overall project coordination; website structure; integration of pages; Git/GitHub coordination; final testing and presentation.
2	Satyam	Frontend Developer	Implement page layouts and responsive HTML/CSS; navigation and reusable UI components; support frontend integration.
3	Tanay	UI/UX & Design Lead	Figma design system; typography, spacing and visual consistency; usability review; polishing the overall interface.
4	Aditya	Frontend Developer	Career Guide and Industry Insights pages; interactive elements; responsive behavior and cross-page consistency.
5	Sanjeev	Frontend Developer / Documentation	How It Works and About pages; content organization; documentation; testing support and final project assets.

Team note: Although each member has a primary area, all members contribute to HTML, CSS, JavaScript/integration, testing, documentation, and the final demonstration as required by the course.

SECTION C: PROBLEM STATEMENT

Background: Many college students know that choosing a career requires more than selecting a degree, but they often lack a single place to understand career options, required skills, practical preparation, and changing industry expectations.

Problem Definition: Career guidance information is often scattered across websites, social platforms, courses, and job portals. Students need a clear and student-friendly starting point that connects career exploration with skill development and practical next steps.

Proposed Solution: Career Campus brings career discovery, skill awareness, practical guidance, and industry insights into one organized website experience.

SECTION D: OBJECTIVES

Primary Objectives

- Design and develop a professional landing page that clearly communicates the Career Campus purpose.
- Provide a simple **How It Works** journey explaining how students can move from self-understanding to career preparation.
- Create a **Career Guide** section to help students explore career paths and understand the skills they may need.
- Create an **Industry Insights** section to introduce students to current industry expectations and awareness.
- Create an **About** page explaining the platform's purpose, vision, values, and student-first approach.
- Implement clear navigation, Login, and Get Started interactions with logical page flows.
- Ensure the interface is responsive, accessible, visually consistent, and easy to understand.

Success Criteria

- All major website pages are implemented and linked correctly.
- Primary navigation and call-to-action buttons perform their intended actions.
- The Figma design and coded interface maintain consistent typography, spacing, colors, and components.
- The website works across desktop and mobile layouts.
- Basic accessibility practices are followed, including semantic structure, readable contrast, keyboard-friendly controls, and appropriate labels.
- The project is maintained in a GitHub repository with a clear README and documented team contributions.

SECTION E: METHODOLOGY & TECHNICAL APPROACH

The project follows an iterative web-development workflow: understand the requirements, design the experience, implement the interface, add interactions, test, refine, and prepare the final demonstration.

Phase	Activity	Output
I	Requirements & Planning	Project scope, page list, user flow, responsibilities
II	UI/UX Design in Figma	Wireframes, visual system, page designs, navigation flow
III	HTML Structure	Semantic page structure and reusable sections
IV	CSS Styling	Responsive layout, typography, colors, spacing and accessibility
V	JavaScript & Interactions	Navigation behavior, buttons, forms and page interactions
VI	Testing & Refinement	Responsive testing, link checks, usability fixes and polish
VII	GitHub & Final Demo	README, organized repository, final walkthrough and presentation

TOOLS & TECHNOLOGIES

- **Design:** Figma
- **Frontend:** HTML5, CSS3, JavaScript
- **Backend / future extension:** Node.js, Express.js, Handlebars or an equivalent templating approach, if required in later phases
- **Database / future extension:** MongoDB with Mongoose, if required in later phases
- **Version Control:** Git and GitHub

SECTION F: PROJECT DELIVERABLES

- Figma prototype covering the agreed website pages and user flows.
- Responsive Career Campus website with the agreed navigation structure.
- Working call-to-action and navigation interactions, including the Get Started flow.
- Career Guide, Industry Insights, How It Works, and About content sections.
- Login page/flow as defined in the project scope.
- GitHub repository containing organized project files and a clear README.
- Final demonstration showing the complete website flow and individual team contributions.

SECTION G: TEAM AGREEMENT

We, the undersigned team members, agree to:

- Participate equally and complete assigned responsibilities on time.
- Attend scheduled meetings and actively contribute to project discussions.
- Maintain honest, complete, and up-to-date project documentation.
- Disclose AI-tool usage transparently wherever required by course policy.
- Understand our individual contributions and be prepared for the individual viva/demo.
- Follow academic-integrity rules and avoid plagiarism or unauthorized copying.
- Communicate professionally and resolve disagreements through discussion or faculty guidance.
- Keep the GitHub repository organized and ensure meaningful contributions from all team members.

SECTION H: TEAM SIGNATURES

Student	Name	Signature	Date
1	Yugank	_____	_____
2	Satyam	_____	_____
3	Tanay	_____	_____
4	Aditya	_____	_____
5	Sanjeev	_____	_____

Prepared for academic project documentation • Career Campus • Web Programming
